Kilen offers one of the widest ranges of replacement Gas Springs available on the European market today for tailgates and bonnets. The range covers the majority of cars found in the European market.

Kilen Gas Springs are stock items and available for order in both small and large quantities.

Kilen Gas Springs consists of a tube, a piston and a piston rod. The tube is filled with high pressure nitrogen, forcing the piston and piston rod to extend. The gas pressure is precisely set during manufacture to obtain the correct spring force depending on, for example, the weight of the rear hatch.

The Gas Spring contains some oil to lubricate the seals, piston and piston rod. The oil also works as a damper when the spring nears full extension.

Kilen Gas Springs are packed in strong attractively designed boxes, complete with application data and part number to ensure that customers receive the correct Gas Spring for the desired application.

Kilen also offer a wide range of standard and heavy duty replacement coil springs, lowering springs and leaf springs.

Important information

1. Do not try to open or drill into a Gas Spring, it is filled with oil and high pressure gas.
2. For safety Gas Springs should always be replaced in pairs.
3. Before fitting a Kilen Gas Spring, please compare its design, length and fitting points against the original part to ensure the correct part has been selected.
4. Check the fitting points on the body of the vehicle and repair or replace them if they are damaged.
5. There is a risk that the weight of the tailgate could be too heavy for the Gas Spring designed with original elevating power if the car has been fitted with extra equipment such as spoilers, blinds or hi-fi speakers. A steel replacement bonnet in place of an original aluminium item may also prove to be too heavy.
6. A Gas Springs elevating abilities deteriorate progressively as temperatures get colder.
7. Since it is the Gas Spring which holds open the tailgate or bonnet please ensure some other means of support whilst replacing the Gas Spring, to avoid the risk of injury.
